

Section Quiz #1: ArcGIS

Tuesday, March 3, 2008 -- Meet in Computer Lab 409

- Add data from ArcCatalog
- Create a map layout using a template, add text
- Use tools from the Layout tool bar
- Rename data frames, add a new data frame
- Set transparency while working with multiple data layers
- Measure the length of a line (measure tool), change units; measure the distance spanning a series of lines
- Zoom to different scales, zoom to a layer
- Be able to identify projection/coordinate system information
- Use the identify tool to obtain information about raster/vector data
- Interpret raster data, evaluate quantities of a raster grid
- Explore attribute tables for information about map features
- Symbolize features, graduated symbols/colors (Symbology Tab)
- Add labels to features
- Sort an attribute table field
- Edit features (move lines, add vertices)
- Create an attribute query to select features
