

Visualization presentations:

- Come prepared to present your final visualization product on Thursday, December 4th.
- Time limit: 5 minutes*
- Visualization product: a saved scene file, consisting of multiple visualization objects (topography, images, data, graphs, geographic markers, etc.)
- Post your visualization scene file to your website
- Test your visualization scene file before the presentations (and practice your presentation)

Your final visualization project will include the following:

1. A “packaged” visualization scene, which must contain at least 5 “layers” of interactive data.
2. A short digital movie of your visualization “fly-through”.
3. A short summary of your visualization and any conclusions that you are able to make about the data you are presenting (a few paragraphs in length is fine). Post this text to your website.
4. A reference list of data used in the visualization. Also post this text to your website.
